## The Corporate e-Volution

### Executive Summary

The Internet has changed the way as to how the Corporate conducts its Business. Geographical barriers has become talk of the past. Business Applications as a rule need to be up and running efficiently on a round the clock basis, as transactions are unconstrained by geography and time zones.

e-Business is largely about building efficiencies into the traditional business value chain, few places where the potential gains are more important or more valuable than in the distribution chain . By integrating internal ERP and other business systems, and by collaborating with your Customers to automate interactions, businesses can realize a host of benefits. Lower operating costs, shorter production lead times, fewer process disruptions, and better inventory management are few of the benefits that can accrue from the e-Business chain.

Of course, establishing an effective distribution requires collaborating with suppliers and customers. NETBIZ, a B2B Portal from BLUECHIP is a complete solution in this direction.

### NETBIZ

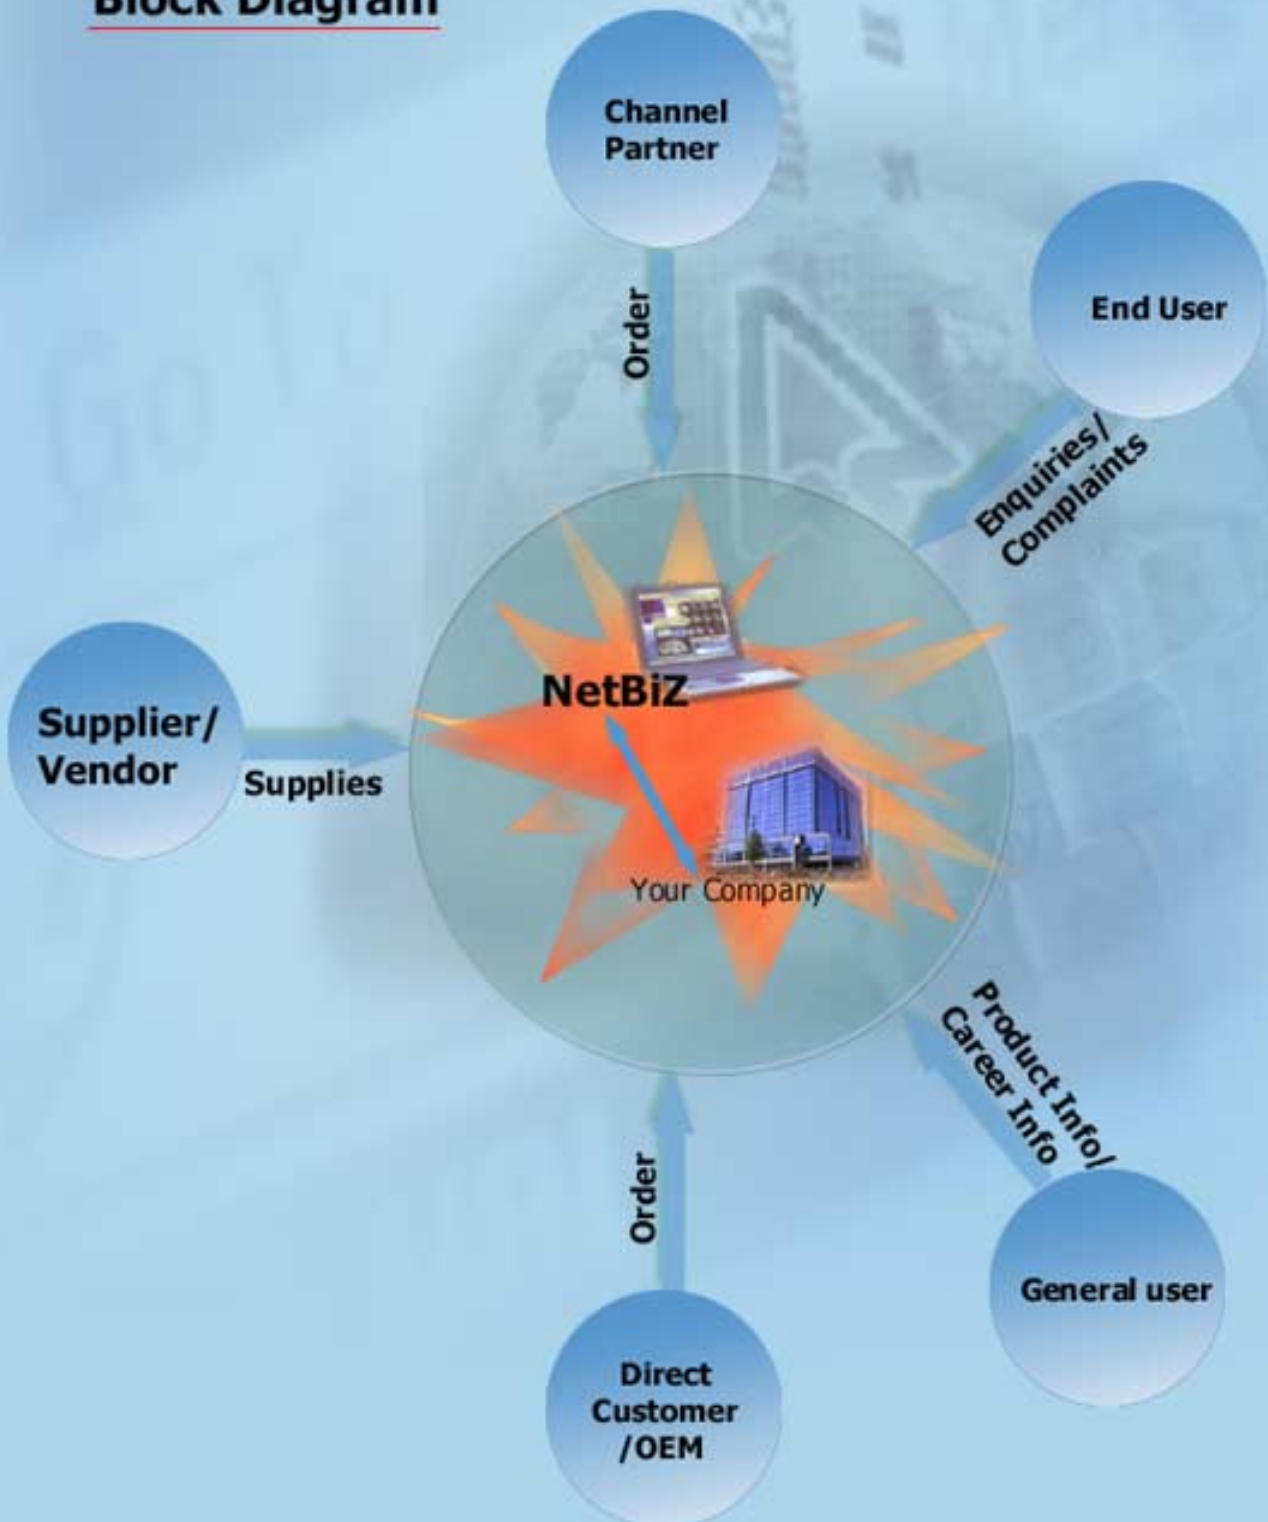

NetBiz is a complete e-solution for any Corporate. It includes the features like Product Information, Online Ordering, Vendor Sourcing, Service Support and Business enquiries. Advantage of NetBiz is its compatibility with any ERP systems enabling complete automation and integration of various work processes. NetBiz provides secured and speedy way to do business over the net.
